

# Automated Disaster Recovery for Microsoft Azure

Eliminate downtime and ransomware risk with the only fully automated disaster recovery platform built for Microsoft Azure.

## Purpose-Built for Azure Environments

Arpio's DR platform is now fully optimized for Microsoft Azure — empowering cloud teams to automate failover, backup, and validation across regions and subscriptions, without scripting or manual runbooks. **How it works:**

### Discovery

Discover everything you have in your environment and understand how it's all connected.

### Backup

Backup your entire environment – data and infrastructure – with custom RPOs as frequent as real-time.

### Validation

Test your recovery plan on your own schedule. Easily spin up a non-invasive test and spin it back down whenever you want.

### Recovery

Get safe, cost-effective, push-button recovery with RTOs counted in minutes. Thanks, manual runbooks, but we're done here.

“With Arpio, we can trust that our Azure workloads are protected, recoverable, and compliant — no matter what.”

## Recover from Anything

### Azure Outages

Ensure business continuity even during major Azure regional disruptions.

### Ransomware

Recover to a clean room environment, and get your business back online safely.

### Human Error

Restore your entire environment to a previous point in time.

### Compliance

Meet business continuity and security mandates with confidence.

# Purpose-built for Azure. Automated. Resilient. Secure.
